

Enable the future of security - today

Security that's not based

on knowledge

or possession,

but on your very being.

Your gateway to biometric security.

Security Today

Some say the age of innocence is gone; that we live in a world filled with frequent, almost daily threats to our security - we agree. Others say it's impossible to safeguard one of today's most valuable assets - information. At JANUS, we don't agree.

BIO*GATE is an authentication framework that allows businesses the freedom of choice in using biometrics. Pick a BioAPI compliant biometric device and implement it for a system logon anywhere in your environment, reliably, but more importantly securely. All aspects of BIO*GATE are remarkably flexible which allows for long life and rapid ROI.

*BIO*GATE is your gateway to biometric security.*

Working with advanced biometric technology, we've developed a solution that will change the way the world manages and protects its information assets. A solution that brings a level of security generations beyond common security applications. It eliminates the repetitive process of password management to control network access; all the while giving users the simplest, yet safest and most trusted way to log on — their unique identity as human beings.

Welcome to BIO*GATE.
Your gateway to a more secure future.

facial pattern recognition:

Flexibility

BIO*GATE represents an evolutionary solution that meets two central needs; freedom of choice and enterprise control. It is the world's first biometric authentication framework supporting multi-factor, mixed-device authentication without the need for customized "wrappers". It also permits the migration of devices to biometric security solutions across similar operating platforms.

Biometric Business Case Articulation

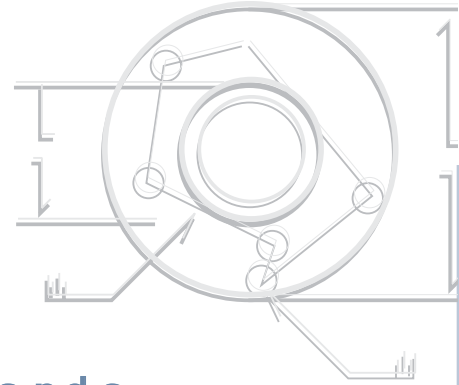

- Increased security
- Increased convenience
- Decreased cost
- The ability to fix or freeze identity

Department of Defense

Biometrics Management Office

BIO*GATE's design enables scalability, stability and a high level of availability for the end user. The solution can easily be distributed geographically, while managing security policies and controls centrally. All this while also affording the flexibility of continued growth because it is based on standards established for the future of biometric technology.

iris scanning:

Standards

Industry Standards - Compliant

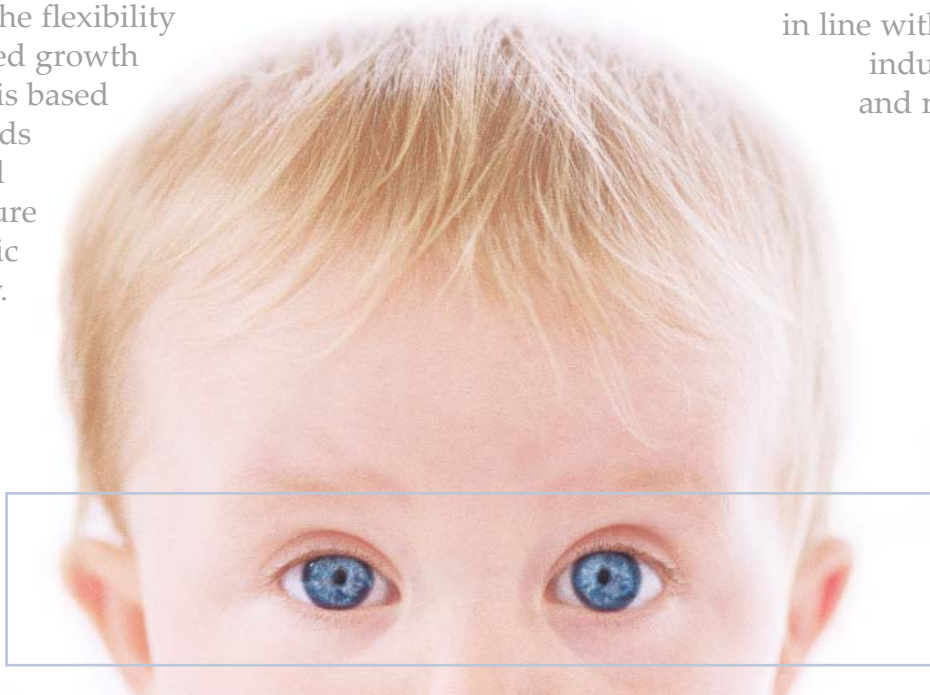

- BioAPI
- Common Biometric Exchange File Framework (CBEFF)
- Common Data Security Architecture (CDSA)

Corporate Governance

BIO*GATE Can Drive Compliance

- Gramm Leach Bliley
- Health Insurance Portability and Accountability (HIPAA)
- Sarbanes-Oxley

By adhering to industry-based standards and helping fulfill government regulations, BIO*GATE is positioned to stand the test of time while it evolves to deliver new functionality in line with emerging industry trends and regulations.

Security

BIO*GATE offers the following security features:

- A wide range of biometric security combinations, including voice, finger print, iris and face scanning
- Multiple user logins
- Authenticate and authorize capabilities (verify and allow)

It provides security at three layers: desktop, local domain and trusted domains.

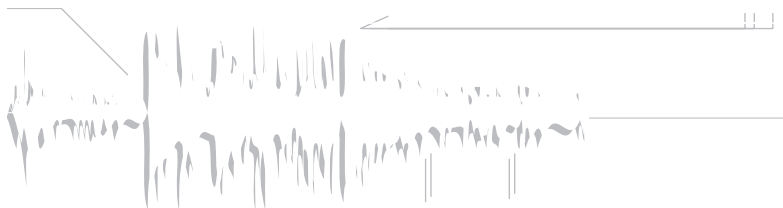

"We believe that JANUS is well positioned to become a "trusted advisor" in areas related to enterprise biometric security, and the integration of physical and electronic security initiatives."

Robert Francis Group

voice print recognition:

Value

BIO*GATE provides value across an enterprise, whether on the desktop, domain or cross-domain. BIO*GATE enables the push-out administration of security rules and centralized/decentralized enrollment.

With its integration to the Windows® policy management system, BIO*GATE provides the basis for additional security functions such as access control, auditing and confidentiality.

With its ease of maintenance, BIO*GATE reduces administration costs significantly by focusing on maintainability, providing "plug-in" compatibility with standards-based devices, as well as an open source infrastructure.

Features

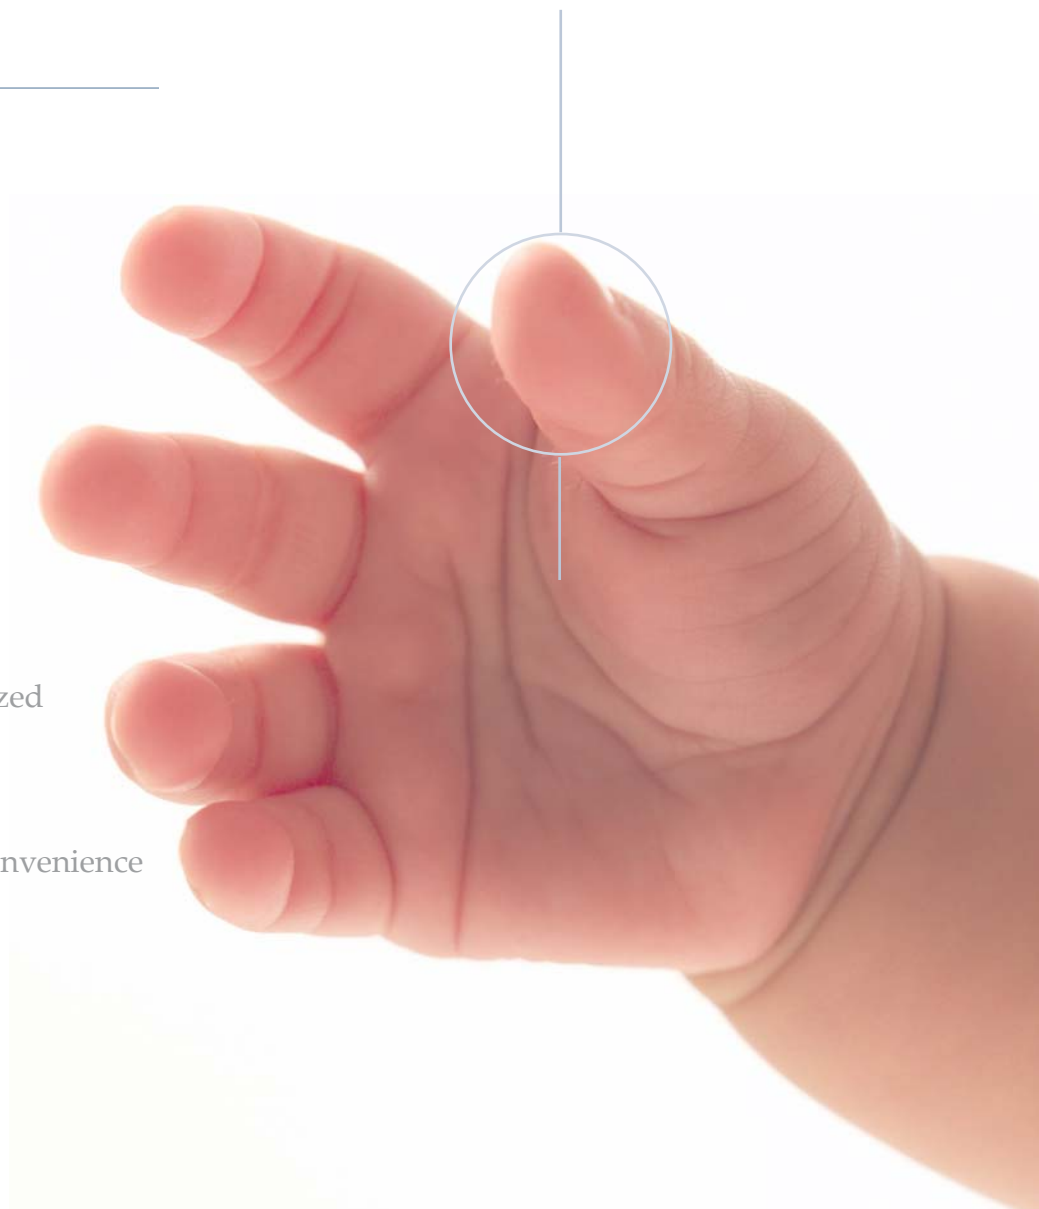

- BioAPI and CBEFF compliant
- Designed to CDSA standards
- Multiple authentication modalities
- Biometric matching for secure authentication between client workstations and servers
- Centralizes management of server-based authentication
- Encrypts communication between client workstations and servers

**finger / hand geometry
and pattern recognition:**

Benefits

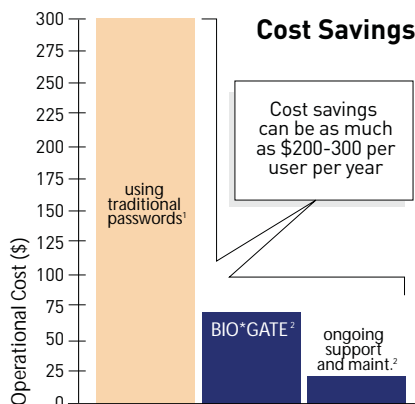

- Backward compatibility with legacy systems
- Multiple vendor computing environments
- Multi-authentication methods
- Seamless integration
- Open architecture
- Supports existing infrastructures
- Complete authentication infrastructure
- Portability
- Robustness
- Centralized or decentralized administration
- Scalability
- Standards compliant
- Increased security and convenience

Return on Investment

Simple, secure access to information doesn't have to come at a hefty price. Organizations can now have it all, reducing the total cost of managing day-to-day network security, while dramatically increasing user convenience. How?

BIO*GATE eliminates the need for multiple entry/sign-on modes. Just a clean, simple, fast login process for authorized users - saving significant dollars while protecting the security and safety of your environment.

¹ The industry analyst firm, IDC, estimates that the annual cost of password management ranges between \$200-\$300 per user.

² On the average, a BIO*GATE application can cost as little as \$70.00 per user the first year, with support and upgrades adding less than \$12.00 per user, per year thereafter.

Summary

BIO*GATE offers the perfect balance of user convenience, enterprise control and a lower total cost of ownership. It features an open architecture that supports everything from today's passwords to a virtually limitless number of groundbreaking biometric devices.

This means users can log on across the network today; while tomorrow, organizations can migrate smoothly to new biometric security solutions across similar operating platforms.

Managing network access will never be child's play. But with BIO*GATE, it is as simple and as open as it can be. A new age of freedom has arrived!.

BiometriTech Product of the Year

BIO*GATE has won a BiometriTech Product of the Year Award as "representing outstanding achievement and industry leadership in biometrics".
