

Specialists in Information Security and Controls

Compliance Management, Business Continuity Planning, Disaster Recovery, Certification and Accreditation, Information Technology Solutions and Information Assurance

Exceed Your Information Technology Security Goals and Requirements

Federal Information Security

Weak security can be devastating to an agency - both in terms of data loss and public trust. An information security breach, infectious code, or lack of security policy can even lead to a national threat.

Federal legislation and guidance have heightened responsibility for agencies to deploy security methodologies, awareness, tools, and compliance strategies, to broaden the scope of security, and to strengthening business continuity throughout all federal communities. JANUS can assist with such a deployment and provide the technical expertise to meet ever-increasing security requirements of OMB A-123, NIST, HIPAA and others.

The staff at JANUS understand federal challenges and work closely with you to align compliance, guidance, and procedures that make your information systems secure. By using industry best practices and taking the extra steps to exceed the specifics of an agency's mission and goal, JANUS can help ensure the availability, confidentiality, and integrity of IT systems, applications, and data assets.

The JANUS Information Security team is comprised of experienced, certified, and accredited professionals. Their advanced training and knowledge assists your IT infrastructure to be as secure and compliant beyond the required expectation. A JANUS information security assessment utilizing recognized leading methodologies, guides you through the morass of security concepts to help you achieve information system security.

Your IT security and compliance strategies can stand up to global scrutiny when you partner with the professionals at JANUS.

Certification and Accreditation

All across the U.S., government agencies are rethinking how to respond to information security threats, vulnerabilities and disasters. The wrong response result in consequences such as identity theft, national security exposure and diminished public trust.

Because of this, legislation has been passed with strict mandates that require government officials to broaden security preparedness in the event of a catastrophic or security event.

JANUS consists of a professional group of IT security consultants who help to enable consistent, comparable, and repeatable assessments of security controls in federal information systems; promote a better understanding of agency-related mission risks resulting from the operation of information systems; and create more complete, reliable, and trustworthy information for authorizing officials to facilitate more informed security accreditation decisions.

JANUS understands that security Certification and Accreditation (C&A) are important activities that support a risk management process and are an integral part of an agency's information security program.

Janus' tried and tested C&A process allows government officials to make fast and efficient IT security related decisions that limit the expense, exposure and risk to their agencies.

Today's dwindling budgets force you to work smarter to achieve your goals. JANUS can help you get there on-time and within budget.

Certification and Accreditation continued

JANUS' has extensive experience with federal contracts that require FISMA, OMB Circular A-130, and NIST compliance. This allows us to provide quality control and support to managers and technical staff at all levels. Giving those staff members the ability to implement the most effective security controls possible and work through mission requirements, technical, operational, and cost/schedule constraints within their information systems. The JANUS C&A process provides agency officials with the most complete, accurate and trustworthy reports regarding the security status and overall state of their systems.

Recent C&A projects were completed for other agencies including the Department of Veterans Affairs, the Federal Insurance Deposit Corporation, C.M.S. and D.O.I to name but a few.

JANUS can help provide the missing piece in your compliance strategy.

Each success produced robust IT Security Management components to include:

- Information Technology Infrastructure Security Design and Review
- Security Policy and Procedure Development
- Infrastructure Penetration Tests
- Independent Verification and Validation
- Certification & Accreditation
- Security Training, Guidance, and Standards
- Security Risk Assessment
- Security Test & Evaluation
- Business Impact Analysis
- Risk Mitigation and Repeatable Processes
- Continuity Planning/Continuity of Operations

Federal Expertise You Can Trust

JANUS' relationship with the Federal government spans nearly two decades. We have had the honor of providing quality on-time and within budget services for 11 agencies (3 not listed due to security). The thoroughness of our work and attention to detail speak to the level of engagements we continue to win.

Case Points

FDIC - When the Federal Deposit Insurance Corporation (FDIC) needed a comprehensive C&A solution for its multi-million dollar IT Security Risk Management program, they turned to a company they could trust. JANUS conducted the agency's risk management process, performing multiple tasks including program management, evaluations, training and awareness, help desk setup/operation, and many other duties. The FDIC recognized that at JANUS there was both the needed technical talent as well as an understanding of the FDIC's business environment, thus providing additional value to the agency.

CMS Centers for Medicare & Medicaid (CMS) – During a major information security program upgrade CMS turned to JANUS to perform the business process re-engineering analysis, produce analytical findings and recommendations, then lay out a structure for beginning to solve problems in an organized and affordable manner. In several additional CMS contracts JANUS has undertaken a multitude of additional tasks including designing information security templates to ease user compliance in meeting Federal mandates; performing penetration tests; programming Computer Based Training components and providing training content; carrying out ST&E testing at Medicare contractor sites throughout the U.S.; and designing policies and procedures to further the development of the information security program.

Implicit Trust of Our Clients

For over 19 years JANUS Associates has served some of the most respected and prestigious organizations in the nation. Our clients trust us implicitly to handle their engagements in a professional and cost-effective manner and our reputation attests to these facts. JANUS clients cover the entire spectrum of Fortune 500 companies, federal, state and municipal entities, and Not-For Profits.

Here is what a few of them had to say.

"JANUS consultants provided on-the-spot advice, thorough and intelligible affidavits, and technical information that assisted us in creating sensible recommendations for the court." "Ultimately, with the strong support provided by JANUS, we were able to obtain a revised discovery order, which was approved by the presiding judge in our case." *Donn Christensen Attorney at Law, Gancedo & Nieves*

"Recently and under very intense deadline JANUS provided expert knowledge and skill in supporting our development of automated risk analysis / assessment tools, corporate level procedures for risk assessment, awareness and training to divisional components... Typically these are 1) performed at a moment's notice, 2) through long hours of commitment and 3) results deliver exceptional products with professionalism noticed by high level management ...making our vision realized. I congratulate JANUS Associates for their leadership, performance and a job well done." *Kahletta Montgomery, Oversight Manager-Information Security Staff, Federal Deposit Insurance Corporation*

"...working out wonderfully. ...great with providing recommendations to improve the process and working with me to get things to completion. ...understands the different technologies and is extremely process-oriented." *Jason Harrell, Security Officer, ABN AMRO Bank*
